Projects: Details & Email

Version V3.10.32: 20 March 2012

Details

The details tab gives you an overview of all the basic information of a project, which includes project name, project status (proposed, current and close), client name, project location, project start date, project type and a list of selected tools for a project.

| Details | Мар | Email | DDNA | Project Te |

| Sample Data? | Internal Project | ? | vaministration. | |

The left half of the screen, shown above, displays all of the choices you made to set up your project. You can come back to amend any of these choices at any time. For example, you can change start/stop dates, or add or delete Checkset selections.

iProjects

The blue <u>re-assign</u> button is used if you need to change the Client name (which sometimes happens!). This button takes you to the **Project Team** page and opens a dialog window, shown next page.

The Sample Data? check box lower left is used by **iProjects** to identify "sample" projects to be used for demo and training purposes. You can delete all sample projects, or use this button to keep your own Sample Projects for internal training purposes if you wish.

The right side of the page displays the ProForm and Checklist tools you selected in the Design DDNA page after you created your project.

If you change your DDNA selections, you need to click the Update buttons to reflect these changes on the **Details** layout.

You can review any of these tools by clicking the red arrow next to the form title.

A special feature of this display is the Show Me function shown at the top of each list. This function displays all the selected tools, but in alphabetical order; clicking on any one displays it.

Selected Stage Tools For Selected Discipline
